Veterinary  
Dental Services, LLC

This 1.5 hour presentation will target the education of veterinarians and will review the categories of oral tumors and cysts found in canines and felines. We will begin with a review of patient symptoms and tumor appearance and then delve into diagnostic imaging and biopsy techniques. Finally, treatment options and prognosis for each type of lesion will be discussed.

Approved for 1.5 hours of CEUs with MVMA

**Dr. Kristina Feigin** is an associate veterinary and veterinary dental resident at Veterinary Dental Services, LLC. She has worked as small animal veterinarian for over ten years prior to joining the team at VDS. She is a member

of the Foundation for Veterinary Dentistry and the American Veterinary Medical Association. Her current research includes analysis and assessment of pulp vitality in intrinsically stained teeth in dogs.
